Ignite the Intellect

The world is big and large.
It takes some unconventional thinking to comprehend it.
And then wonder about it. And then enjoy it.

It has been the tradition in India
that an young person's intellect is ignited
in a ceremony called Medha Jananam
to help understand the subtleties around and the secrets beyond.

The 'introduction to life' course is designed
to do the same, in the context of the modern world.

Mirror, Microscope and Telescope

All successful people carry three things with them.
A mirror, a microscope and a telescope.

The mirror shows them clearly what they are.
The microscope shows what is around them in clear detail.
The telescope gives a sense of what is there on the far horizons.

The ‘introduction to life’ course is designed
to give you a mirror, a microscope and telescope.

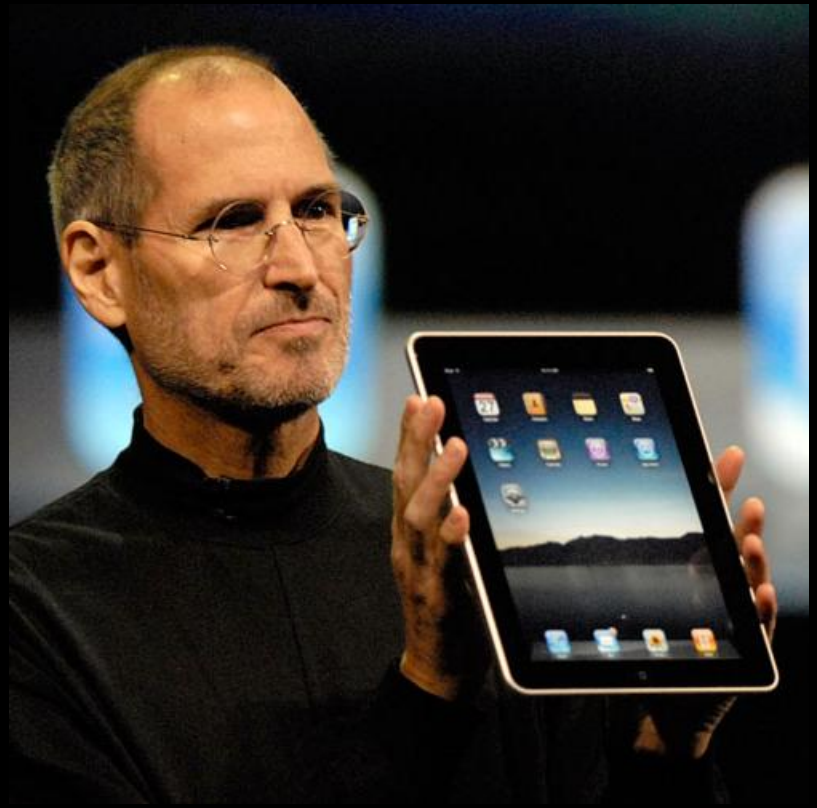
Sixth stream of learning

A college course teaches you about finances. But not about you.
It teaches you about music. But not about you.
It teaches you about your biology. But not about you.

Parents and environment urge you to become better and bigger.
But not to become yourself.

All the normal streams of learning focus on a subject,
so that you can learn about it.

The 'Introduction to Life' focus on you,
so that you learn about yourself.



iPad

The science and technologies that went into iPad are not unique to iPad.
*But iPad **is** unique.*

Much of what you will learn in the 'Introduction to Life' course
is also available else where.
But the experience of this course is unique.
And it is available nowhere else.

It brings many gems of the classic wisdom and
many jewels of the modern advances,
to give you a unique experience that
will exhilarate you.
